

Galaxies in their broader setting (HWR)

How does gas get into galaxies?

Why was hot mode cold flows not mentioned? Is it not pertinent?

What are the best ways to verify feed-back efficacy; by its effect on the ISM/CGM?

More effort on delineating the pre-star-formation universe

less HST, more ALMA!

What's the Lilly-Madau plot of star-formation fuel (cold gas)?

To which extent is the cosmic star-formation history a reflection of the (cold) fuel supply, or of changing SF (in-)efficiency
